Maternal Book | 9ed38a6af8f70c85a47a5d5daf1e80cc

pregnancy, safety, immunogenicity (immunology), timing to vaccinate, repeat doses, protective effects in the mother, fetus, and infant, and public acceptance and implementation, of existing and of future vaccines. Provides an overview of a quickly evolving topic. This will benefit the reader who wishes to rapidly be informed of developments in this field. Suitable to a broad audience: scientific researchers, obstetricians, gynecologists, neonatologists, vaccinators, pediatricians, students, and industry. Maternal vaccination impacts a wide range of specialists: Allows health care professionals/researchers to gain insight into other aspects of vaccination in pregnancy outside of their specialization is cautioned by specialists from multiple disciplines, providing a diverse view of the subject, increasing its interest and appeal. Creates awareness of the current developments in this area of medicine and of the potential of maternal vaccination to improve the health of mothers and infants worldwide.

Maternal M easures Examining writing for and about education in the period from 1740 to 1820, Rebecca Davies's book plots the formation of a written paradigm of maternal education that associates maternity with educational authority. Examining novels, fiction for children, educational and political tracts by Samuel Richardson, Sarah Fielding, Mary Wollstonecraft, M aria Edgeworth, Ann M artin Taylor and Jane Austen, Davies identifies an author who demonstrates how the function of the discourse of maternal authority changes over time as the function is modified in different genres, arguing that both the female writers and the fictional mothers adopt maternal authority and produce their own formulations of ideal educational methods. The location of idealised maternity for women, Davies proposes, is in the act of writing educational discourse rather than in the physical performance of the maternal role. Her book contextualizes the development of a written discourse of maternal education that emerged in the enlightenment period and explores the empowerment achieved by women written within this discourse, albeit through a notion of authority that is circumscribed by the 'rules' of a discipline.

Maternal This book demonstrates that the symbol of maternal sacrifice is the notion that 'proper' women put the welfare of children, whether born, in utero or not conceived, over and above any choices and desires of their own. The idea of maternal sacrifice acts as powerful signifier in judging women's behaviour that goes beyond necessary care for any children. The book traces its presence in various aspects of reproductive health, from contraception to breastfeeding. Pam Lowe shows how although nominally choices are presented to women about reproductive health, maternal sacrifice is used to discipline women into conforming to specific norms, reasserting traditional forms of womanhood. This has significant implications for women's autonomy. Women can resist or reject this disciplinary position when making reproductive decisions, but in doing so, they may be positioned as transgressing and/or need to justify their decisions. The book will be of great interest to scholars of sociology, gender studies and health studies.

Maternal Thinking Since the beginning of time, black women have been notorious for going to great lengths in the name of two different kinds of love: the love for our children, and the love for our men. Maternal tells the tale of a street savvy young woman named Risa who has only ever sought out a man's heart for what he could provide her. That all changes when she falls unexpectedly in love with a wayward young man who's heart is under the tight lock and key of another woman, his mother. As she tries to compete with a mother's love, her fight for his heart takes a gut-wrenching turn into a fight for her life and that of her unborn child. This psychological thriller takes its readers on a riveting ride of deceit, kidnapping, coverups, mind games, and much more that literally drives Risa to the brink of insanity, where she meets her maternal match.

Disease Control Priorities, Third Edition (Volume 2) Written by the foremost experts in maternity and pediatric nursing, Maternal Child Nursing Care, 5th Edition offers the accurate, practical information you need to succeed in the classroom, the clinical setting, and on the NCLEX-RN® examination. NEW! Updated Evidence-Based Practice boxes including OSEN K SA's (knowledge, skills, attitudes) provide the most current practice guidelines to promote quality care. NEW! Medication A lerts stress medication safety concerns for better therapeutic management. NEW! Safety A lerts highlighted and integrated within the content draw attention to developing competencies related to safe nursing practice.

Maternal Child Nursing Care in Canada - E-Book A J N Book-of-the-Year Award Winner! A comprehensive women's health reference guide, this "pocket brain" delivers all the practical, evidence-based clinical information you need to care for normal and high-risk pregnant mothers, newborns, and their families in diverse hospital and community settings. This book delves into other women's health issues that may impact the care of the mother-baby dyad, such as culture, substance abuse, family planning, violence against women and sexually transmitted infections. Perfect for students, new-to-practice, or expert practitioners, this guide provides comprehensive assessments, easy-to-understand tables of lab work-ups and values, common treatment guidelines and the steps to implement and evaluate nursing care. As a special feature to assist with learning how to check a cervix, you can practice using the dilatation mileston guide cut outs in the book.

Maternal & Child Health Nursing Lippincott CoursePoint Access Code In an unusual combination of reflection, autobiography, theory, and criticism, Cristina Mazzoni looks at childbirth and early maternity from the perspective of an academic mother with three young children. Mazzoni draws upon examples ranging from contemporary advice manuals and novels to the work of turn-of-the-century Italian scientists and women writers, as well as fairy tales, religious texts, psychoanalytic accounts, and feminist theory. Throughout her investigations of the various forces that shape cultural views of pregnancy and childbirth, Mazzoni strives to imagine and deploy maternity as a concept and a reality capable of challenging conventional representations of subjectivity. The questions she addresses dwell on relationship and interdependence, the inseparability of the personal and the political, and the connections and interactions between bodies and power. Maternal Impressions is far more than a book of literary criticism and theory. It reveals the multiple bonds and continuities between the contradictory ways in which pregnancy and childbirth were represented a century ago and the manner in which they still haunt feminist experience today. In her conclusion, Mazzoni points toward a possible ethics of maternity.

Maternal Effects in Mammals Maternal Newborn Nursing Care Plans, Third Edition teaches students and practicing nurses how to assess, plan, provide, and evaluate care for pregnancy, delivery, recovery, abnormal conditions, and newborn care. Featuring more than 65 of the most common and high-risk care plans for nursing care using the nursing process approach, it includes NIC interventions, discussions on collaborative problems, key concepts, nursing diagnoses, and clinical decision-making skills. Completely updated content matches the textbook and provides a comprehensive review of essential maternal-child concepts and skills.

Maternal Immunization A J N Book of the Year 2009 The ENHANCED, REVISED, REPRINT of Maternal-Child Care Nursing is the same great book that won an A J N Book-of-the-Year Award made even better with the feedback we received from instructors across the country and Canada. It's a complete guide to the role of the nurse in promoting women's health. From class to clinical through NCLEX to practice, it presents all of the information nursing students need to know and shows them how to apply it in both traditional and community settings. There are
even teaching and learning resources for this content online at DavisPlus. The perfect balance of maternal and child nursing care in a new textbook conceivedand written to be a combination textbook. An extensive review by nursing educators stresses that it offers just the right depth breadth of coverage for students. Emphasizes on optimizing outcomes, evidence-based practice, and research supports the goal of caring for women, families and children not only in traditional hospital settings, but also wherever they live, work, study, or play. Clear, concise, and easy to follow content is organized around four major themes, holistic care, critical thinking, validating practice, and tools for care that help students to learn and apply the material.

Maternal Impressions: Maternal and Child Health: Programs, Problems, and Policy in Public Health. Third Edition takes a developmental approach to learning about maternal and child health (MCH). Organized according to fundamental principles of MCH, the book covers traditional MCH topics such as family planning and maternal and infant health as well as skills that are applicable across public health disciplines such as planning, research, monitoring, and advocacy. Successfully tested in prestigious academic programs of Public Health, Maternal and Child Health, Third Edition appeals to students across the health professions interested in women's health, reproductive health, maternal and infant health, the health of children and adolescents, including those with special needs. The Third Edition is a thought-provoking update that includes: New chapters on Environmental Health, Life Course, Oral Health, and Monitoring and Evaluation. Streamlined chapters on Assessment and Planning, MCH Research, Rights and Justice, Advocacy and Policy Development. New and additional material on global health and health disparities in MCH. New material in life course theory. New ancillary course materials for instructors.

Maternal-Child Nursing - Text and Simulation Learning System Package Our current era of globalization, war, and socioeconomic unrest has revealed public health as a worldwide concern and a major frontier for social justice with maternal and child health at its epicenter. Yet, there has been a relative scarcity of training resources specifically dedicated to this crucial area. Maternal and Child Health: Global Challenges, Programs, and Policies addresses this gap in current knowledge by analyzing the range of socioeconomic and environmental factors, health care disparities, politics, policies, and cultural practices that impact the health and safety of mothers, as well as the well-being and optimum development of their children. Individual sections focus on unequal distribution of the world’s resources, politics and power, specific disease concerns, programs, policies and emerging concerns with a focus on what is currently being done, and what needs to be done to improve the health status of women, children, and adolescents. The book’s contributors are among the world’s most respected experts, carefully selected to represent different global geographic regions and diverse professional disciplines related to maternal and child health and both academic and field practice perspectives. Among these topics in this authoritative volume: The impact of war, globalization, gender inequity, and harmful traditional practices (e.g., female genital mutilation). Specific health concerns, including tuberculosis, malaria, HIV, and malnutrition. Child and adolescent health issues, from abuse and neglect to children in difficult circumstances. Preparation for planning, developing, and maintaining maternal and child health services in developing countries. The status of global initiatives, such as Integrated Management of Childhood Illnesses and the Millennium Development Goals. The status of evidence-based maternal and child health in the developing world. With such a wealth of information on both practical and conceptual levels, "Maternal and Child Health: Global Challenges, Programs, and Policies" is as relevant to students and researchers in the field as it is to policymakers and those working for global health and development organizations. It also makes an excellent stand-alone text for courses in global health in general and global maternal and child health in particular.

Maternal Conceptions in Critical Literature and Philosophy This collection, drawn from twelve years of the influential journal Studies in Gender and Sexuality, offers a groundbreaking advance in thinking and theorizing about what happens to women when they become mothers. It explores how women are changed and shaped by interaction with their children and the cultural constructs about motherhood in which they are embedded. Distinguished psychoanalysts, philosophers, feminists, gender and cultural theorists explore the meeting place of cultural representations of motherhood, maternity, and mothering in the clinical setting and with their children, to illuminate how the process of becoming a mother creates and informs female subjectivity, identity, desire, expression, aggression, ambition, shame, envy, and relationships. Contributors find mothers to be complex subjects negotiating hybrid identities that explode received notions of maternal and even female subjectivity in their complexity. They create an exciting and very accessible new set of ideas and templates for thinking about mothers and women that will be of value to clinicians, academics, and mothers alike. This book was originally published as a special issue of Studies in Gender and Sexuality.

Maternal Newborn Nursing Care Plans Maternal Newborn Nursing Care Plans, Second Edition teaches students and professional nurses how to assess, plan, deliver, and evaluate care for normal and abnormal pregnancy, including delivery and recovery for both the mother and baby. This new edition contains more than 65 of the most common and high-risk care plans for maternal and newborn nursing care using the nursing process approach. Organized according to clinical condition, Maternal Newborn Nursing Care Plans, Second Edition provides practical components for each care plan incorporating: Key nursing activities, Etiologies and risk factors, Signs and symptoms, Diagnostic studies, Medical management, Collaborative problems, Individualized care plans complete with the Nursing Interventions Classification (NIC).

Study Guide for Maternal-Child Nursing - E-Book Written by the foremost experts in maternity and pediatric nursing, Maternal Child Nursing Care, 5th Edition offers the accurate, practical information you need to succeed in the classroom, the clinical setting, and on the NCLEX® exam. This new edition offers numerous updates to keep you up-to-date on the latest topics and best practices. Plus, hundreds of illustrations, alert boxes, and tables clarify key content and help you quickly find essential information. Emergency boxes in the maternity unit guide you through step-by-step emergency procedures. Expert authors of the market-leading maternity and pediatric nursing textbooks combine to ensure delivery of the most accurate, up-to-date content. Family-Centered Care boxes highlight the needs or concerns of families that you should consider to provide family-centered care. NEW! Content updates throughout the test give you the latest information on topics such as the late preterm infant, fatal heart rate pattern identification, obesity in the pregnant woman, shaken baby syndrome, traumatic brain injury, Healthy People 2020, car restraints, immunizations, and childhood obesity. NEW! Updated Evidence-Based Practice boxes include guideline sets in knowledge, skills, attitudes, and evidence to provide the most current practice guidelines to promote quality care. NEW! Safety Alerts highlighted and integrated within the content draw attention to developing competencies related to safe nursing practice. The Role of Pregnancy Nutrition in Maternal and Offspring Health An outline format, inexpensive, paperback review book for undergraduate nursing students that can be used for course or subject review or NCLEX® preparation. Contains NCLEX®-style review questions in each chapter, a comprehensive exam, and additional questions on a back-of-book CD-ROM. This edition includes new NCLEX®-style innovative item questions.

Written by an author of the influential and Eighteenth-Century Education in Britain A better way to learn maternal and newborn nursing! This unique presentation provides tightly focused maternal-newborn coverage in a highly structured text.

Maternal Child Nursing Care - E-Book Women, Mothers, Subjects This book brings to life the experiences of children affected by maternal imprisonment, and provides unique, in-depth analysis of judicial thinking on this issue. It explores the experiences of children whose mothers are sentenced to imprisonment in England and Wales and contrasts their state-sanctioned separation from their mothers in the criminal courts (where the court may not even be aware of the existence of a child) to the state-sanctioned separation from their parents in the family courts, where the child has legal representation and their best interests are the court’s paramount consideration. Drawing on detailed empirical research with children, caregivers, and Crown Court judiciary, Matal Sentencing and the Rights of the Child brings together relevant literature on law, criminology, and human rights to provide insight into the reasons for the differentiated treatment and its implications for children, their caregivers, and wider society.
with a wealth of user-friendly features to help you quickly master essential concepts and skills. It offers completely updated content—including expanded information on the late preterm infant, fetal heart rate pattern identification, obesity in the pregnant woman and children, and enhanced coverage of the ONL™, the learning tools so you have ample opportunities to apply your knowledge and skills. Nursing care plans help you apply the nursing process to plan individualized care for the most common maternity and pediatric conditions. Critical to Remember boxes summarize and highlight essential, need-to-know information. Critical Thinking Exercises allow you to apply your knowledge to realistic clinical situations. Communication Cues provide practical tips for effective verbal and nonverbal communication with patients and families. Clinical Reference sections in pediatric chapters present information relevant to each body system, including anatomy and physiology, differences in the pediatric patient, and related laboratory and diagnostic tests. Safety Alerts call attention to important patient safety considerations for better outcomes of nursing care. Glossary at the end of the book offers quick access to all key terms and definitions presented in the text. Want to Know boxes provide teaching guidelines such as communication guides directed at patients and families. Pathophysiology boxes present an illustrated overview of disorders. Updated drug guides summarize key medication information. NEW! Completely updated content includes expanded information on the late preterm infant, fetal heart rate pattern identification, obesity in the pregnant woman and children, and the QSEN initiative. UPDATED! Evidence-Based Practice boxes with newly researched topics offer the most current practice guidelines to promote quality care. UPDATED! Online resources offer the best interactive tools to learn in the most effective way possible. NEW! Improved consistency between maternity and pediatric sections makes it easier to switch from one area to the other for more efficient learning.

Mental and Child Health Maternal-fetal medicine has evolved over the last three decades to become a well-established discipline. The current understanding of maternal physiology and pathophysiology has allowed us to obtain more accurate diagnoses and to provide more effective treatments of medical, surgical, and obstetrical maternal complications. More importantly, the fetus has become a distinct individual whose in utero environment has become much more accessible to study, diagnosis, and treatment. Clinical Maternal-Fetal Medicine addresses the pathophysiology, diagnosis, and treatment of common medical and obstetrical maternal complications and fetal complications. It provides a concise and timely review of clinically relevant topics in this discipline. The textbook is a comprehensive reference covering the wide range of disciplines that make up maternal-fetal medicine.

Reproductive Health and Mental Maternal Sacrifice In the second half of the eighteenth century, motherhood came to be viewed as women’s most important social role, and the figure of the good mother was celebrated as a moral force in American society. Nora Doyle shows that depictions of motherhood in American culture began to define the ideal mother by her emotional and spiritual roles rather than by her physical work as a mother. As a result of this new vision, lower-class women and non-white women came to be excluded from the identity of the good mother because American culture defined them in terms of their physical work. This book shows that childbearing women contradicted the ideal of the disembodied mother in their personal accounts and instead perceived motherhood as fundamentally defined by the work of their bodies. Enslaved women were keenly aware that their reproductive bodies carried a literal price, while middle-class and elite white women dwelled on the physical sensations of childbirth and childrearing. Thus motherhood in this period was marked by tension between the lived experience of the maternal body and the bodily and emotionally ethereal vision of the ideal mother that permeated American print culture.

Mental Optimism Growing research shows that many children from immigrant and refugee families are not doing well in school, due in part to linguistic and cultural disadvantages. Teaching dual-language learners requires cultural sensitivity, an understanding of language acquisition, and intentional teaching strategies. Combining research and techniques, this resource helps early childhood educators support dual-language learners as they develop the skills necessary for school readiness and success.

Clinical Maternal-Fetal Medicine Evolutionary maternal effects occur whenever a mother’s phenotypic traits directly affect her offspring’s phenotype, independent of the offspring’s genotype. Some of the phenotypic traits that result in maternal effects have a genetic basis, whereas others are environmentally determined or due to maternal nutrition. For example, a mother’s nutritional status can affect the growth rate of her offspring, while a mother’s dominance rank—an environmentally determined trait—can affect the dominance rank of her offspring. The first volume published in the subject in more than a decade, Maternal Effects in Mammals reflects advances in genomic, ecological, and behavioral research, as well as new understandings of the evolutionary interplay between mothers and their offspring. Dario Mestril and Jill M. Matsuura bring together a learning group of contributors to synthesize the vast literature on a range of species, highlight evolutionary processes that were previously overlooked, and propose new avenues of research. Maternal Effects in Mammals will serve as the most comprehensive compendium on and stimulus for interdisciplinary treatments of mammalian maternal effects.

Mental-Newborn Nursing This highly respected book helps students develop the technical skills and broad understanding vital for effective practice while ensuring they never lose sight of the importance of compassion in their role as nurses. Presenting maternal-newborn and child health care not as two separate disciplines but as a continuum of knowledge, Mental and Child Health Nursing, Seventh Edition views the experience of wellness and illness as family-centered events and pregnancy and childbirth as periods of wellness in a woman’s life. Consistently linking theory with application to bring clinical concepts to life and using a nursing process framework to help students prepare for effective practice, this Seventh Edition adds new chapters on infant care, the latest QSEN content, and more. In addition, this edition is supported by PrepU’s adaptive quizzing, DocuCare’s educational electronic health record software, and a fully updated Study Guide.

Mental-Fetal and Neonatal Endocrinology Every working mother’s path is unique and should be celebrated, not lamented. Yet all too frequently, working mothers are presented with advice, rules to follow or guidelines as if all women’s experiences are the same and a one-size-fits-all solution is appropriate. Mental Optimism: Forging Positive Paths through Work and Motherhood aims to provide readers with stories and research that support the notion of women owning and feeling confident in the choices they make, as they navigate a complex series of work and family transitions. This book challenges the impulse to reduce work/life challenges to a single point in time, such as the decision to return to work after the birth of a child; instead, it recognizes that work and family decisions are anything but stagnant. They shift as life and career shift and are often filled with unpredictable events. By understanding and anticipating these shifts, working mothers can develop the resilience they need at home and at work. This book is a resource for all professional women as they approach the difficulties and joys of growing a family and a career.

Mental-Obstetric and Pregnancy This money-saving package includes the MCKinney: Mental-Child Nursing, 3rd edition textbook, and the Simulation Learning System (SLS) User Guide. As a student, you will receive the MCKinney: Mental-Child Nursing, 3rd edition and STUDENT ACCESS ONLY - INSTITUTIONAL LICENSE REQUIRED. The Simulation Learning System (SLS) integrates simulation technology into your combined maternity and pediatric nursing course by providing realistic scenarios and supportive learning resources that correspond to MCKinney: Mental-Child Nursing, 3rd edition. The SLS offers targeted reading assignments and critical thinking exercises to prepare you for the simulation experience; access to patient data with a shift report and fully-functional electronic medical record (EMR); post-simulation exercises including charting and documentation activities in the EMR, reflective journaling, and concept mapping; and review resources including animations, videos, and textbook references. Simulation with the SLS is a complete learning experience that bridges the gap between lecture and clinicals to prepare you for the real world of nursing.

Mental-Newborn Nursing Care This book explores motherhood in Greek and Roman literature, focusing on images of mothers and their relationships with their children across a variety of genres.

Mental Sentencing and the Rights of the Child Mental-Fetal and Neonatal Endocrinology: Physiology, Pathophysiology, and Clinical Management systematically examines the normal and abnormal endocrinology of the pregnant and lactating female and of the fetus and neonate. This reference volume expands coverage of specific disorders and diseases beyond the current QSEN content on the market, which in most cases has a paragraph or no mention at all about pregnancy or aspects of fetal/neonatal development. Formalized source of maternal/fetal endocrine physiology and pathophysiology Key reference for fellows and residents for rarer endocrine pathologies Integrated presentation of new molecular and genetic causes of endocrine disorders Bridge the experience/knowledge gap of endocrinopathies rarely encountered in pregnancy.
mothers and stepmothers, but also midwives and nurses, tutors and educators, wise women and witches. The contributors to this volume present research and criticism on a wide range of early modern care-giving roles by women in England, Italy, Spain, France, Latin America, Mexico and the New World. The essays are not only cross-cultural but also interdisciplinary, spanning literature, history, music and art history; and they focus on differences of gender, class and race. A wide variety of scholarly and critical approaches are represented. Essays are grouped in categories on conception and lactation; maternal nurture and instruction; domestic production; and social authority.

Maternal Bodies Maternal-Neonatal Nursing Made Incredibly Easy! Third Edition offers everything nurses need to know for optimal maternal-neonatal nursing care.
